Business Analyst & Production Engineer | Data Analytics | Custom Tooling | Process Automation

Summary

Technical & Analytical Expertise: Computer Programming background with hands-on experience bridging technical execution, cloud cost optimization, and enterprise business analysis.
Process Automation & Tooling: Proficient in leveraging Power Platform, Python, SQL, and GenAI to automate manual workflows, build custom solutions, and extract high-value insights.
Resiliency & Support Management: Strong track record in application resilience, incident resolution, and monitoring enterprise systems using Power BI and Splunk under ITIL frameworks.
Cross-Functional Leadership: Skilled communicator adept at translating complex technical data for executive stakeholders, coordinating cross-functional teams, and driving \$300k+ efficiency initiatives.

Education

Sep 2018 - Jan 2021

B.S. Degree Program in Computer Programming/Information Systems
Farmingdale State College, Farmingdale, NY

Skills & Competencies

Business & Strategy: Enterprise Contract Auditing, Cloud Cost Optimization, Project Management, License Compliance, Executive Reporting, Cross-Functional Leadership
Programming Language: C#, .NET, SQL, Python, HTML, CSS
Frameworks & Tools: WPF, ASP.NET Core MVC, Power Apps, Power Automate, Power BI, Copilot
Platforms & Systems: Linux, Splunk, Windows, SharePoint, ServiceNow, Salesforce, Cloudability
Software & Utilities: Microsoft Excel, Graphic Design Tools, Visual Studio, VS Code

Work History

May 2026 – Present

Business Analyst

Charles River Development | Burlington MA

- Spearheaded a cloud environment reconciliation project auditing active client environments against legal contract entitlements, generating over \$300,000 in annual savings.
- Built a custom Power Apps application with dynamic filtering and automated Power Automate workflows to streamline ingestion, formatting, and Excel report generation.
- Engineered specialized prompt templates to extract critical financial and legal parameters from complex enterprise documentation with high precision.
- Conducted software license compliance audits across enterprise contracts to identify true-up opportunities, verify usage accuracy, and evaluate potential cost-reduction clauses.

Oct 2021 – May 2026

Production Support Engineer

State Street Bank & Trust Co. | North Quincy, MA

- Orchestrated end-to-end disaster recovery site testing for a portfolio of 12+ integrated applications.
- Designed interactive Power Apps applications and Power BI dashboards to transform operational data into real-time scheduling and monitoring for executive leadership.
- Forged strategic partnerships between cross-functional teams, stakeholders, and application owners, effectively bridging communication gaps and aligning technical execution with business goals.
- Integrated Generative AI (Copilot) into daily workflows to automate document summarization, enhancing user-facing deliverables and providing solutions to emerging operational challenges.

Mar 2021 – Apr 2021

Production Support Management

Wiley Edge (formerly Mthree) | Remote

- Successfully completed Hire-Train-Deploy program focused on mastering in-demand technical skills and industry-standard frameworks.

- Developed expertise in automation using Python for programming, SQL for robust data management, and Linux for system administration and operations.
- Gained a comprehensive understanding of the intersection between software development, technical architecture, and business operations.
